

Shallott 1647.
An Almanacke, for the
yeere of our Lord God

1647.
Being the third after B. C.
or Leap-yeare, and from the
Worlds Creation
5657.

Calculated properly for the fa-
mous Univerlity and Town of Cam-
bridge, where the Pole is elevated
52. degrees and 17. minutes
above the Horizon.

And God said, Let there be lights in
the firmament of the heaven, to divide
the day from the night: and let them be
for signes and seasons, and for dayes and
yeares. Gen. 1. 14.

LONDON
Printed by Iohn Dawson for the
Company of Stationers.

The Anatomy of Mans Body, as the parts thereof
are governed by the twelve Signes.

V Head and face,

Necke and
throat.
Breast, Ro-
macke, and
ribs.
Bowels
and belly.
Secret
members.
Knees.

Armes and
shoulders,
Heart and
backe.
Reines and
loynes.
Thighes.
Legs.

X The Feere,

The beginning and ending of the Terms.

Hilary	<p>The first of Hilary Term shall be On Ianuary the twenty three; And on the twelfth of February, This term doth end most certainly.</p>	Term.
Easter	<p>And Easter Term from Easter day, The wednesday fortnight begins alway: And when the Ascension day is past: Till monday next this Term doth last.</p>	Term.
Trinit.	<p>On friday after Trinity This Term begins assuredly: And as our Lawyers all do write, It ends the wednesday fortnight.</p>	Term.
Mich.	<p>If Michaelmes Term you seek to finde, Of Robert be 23. now beare in mind: It ends as I doe well remember, The twenty eighth day of November.</p>	Term.

The natures of the 7. Planets.

Them that we call the 7. Planets, are Saturne, Jupiter, Mars, Sol, Venus, Mercury, Luna.

1. ♄ Saturne is cold and dry, stirres up and increaseth melancholy.
2. ♃ Jupiter is temperately hot and moist, works most upon sanguine complexions, stirring up and increasing that humour.
3. ♂ Mars, through his heat and immoderate drynesse, stirres up and increaseth choler; and so, often proves an accidentall cause of brawlings, fightings, warres, and the like, beside such sicknesses as may come by the superabundancy of that humour.
4. ☉ Sol is moderately hot and dry, greatly cherishing all kind of creatures.
5. ♀ Venus is cold and moist, but it is in a temperate manner: and as for her operation it is seen most in flegmatick complexions.
6. ☿ Mercury is said to be dry in respect of his own nature; but joyned to any of the other Planets, hee puts upon him their natures, and works as they work.
7. ☾ The Moon hee follows next, and is well enough known to be the mistress of moisture.

January hath xxxj. dayes.

First quarter the 4 day, 6 min. past 2 in the morning.

Full moone the 10 day, 31 min. past 9. at night.

Last quarter the 17. day, much about 4 in the afternoon

SWALLOW,

The latter part of this

Almanack for the yeare

Of our Lord God,

1647.

Being the third after *Bissextile*,
or *Leap-Year*, and from the Conquest
of *England* by Duke *William*, 581.

Wherein

The day and houre of the Sunnes
entrance into the foure Cardinall
Signes is shewed, the Eclipses de-
clared, and other things related,
for such a Book, and worthy
of observation.

LONDON.

Printed by *Bernard Alsop*, for the Com-
pany of STATIONERS.

The Characters of the Planets, &c.

- 1 ♄ Saturne, His houses, Capricorne and Aquarius.
- 2 ♃ Jupiter, His houses, Sagittarius and Pisces.
- 3 ♂ Mars, His houses, Aries and Scorpio.
- 4 ☉ The Sun, His house is Leo.
- 5 ♀ Venus, Her houses, Taurus and Libra.
- 6 ☿ Mercury, His houses, Gemini and Virgo.
- 7 ☾ The Moone, Her house is Cancer.
The Dragons head; ♀
The Dragons tayle; ♂

And note that such or such a Signe is called the House of such or such a Planet; because their Dominion is greater there, then else-where; and so it is also for the houses of the Heavens, when the Sphear is divided into twelve parts.

Swallow, 1647.

The day and hour of the Suns entrance into the
four Cardinall signes this present year, 1647.

First of the Spring.

The Cardinall signes are Aries, Cancer,
Libra, and Capricorn, being as it were the
hinges on which the yeare hangeth, and by
which it is diuided into foure Quarters.

These Quarters among the Iewes were cal-
led *Tekuphas*, or *Conuersiones anni*, two of which
fall into the Equinoxies, when \bar{v} dayes and
nights are equall; and two into the Solstitiall
points wherein there is as it were *Solis stasis*,
because for certain dayes together, the Sun
seemeth to stand still the dayes not sensible per-
ceiued either to lengthen or shorten. The late
Rabbins of the Iewes doe most of them begin
the yeare from Autumn, as from its naturall
head: but the old Christian Fathers of the
Church reckon from the Spring.

The sign with which this quarter enters is
Aries, into whose first minute the Sun cometh
this year the 10 of March, at 49 min past 2 in
the afternoon, the 27 of Leo then ascending.
The chief Dominatores are Mars, Sol, Jupiter,
Luna.

Swallow. 1647.

Of Summer.

The next quarter is Summer, the Cardinal sign belonging to it is Cancer, into which the Sunne entresth this yeare on the 11 day of June, about 6 a clocke and 40 min. afternoone. The chiefe domination is giuen to Jupiter, next unto whom is Luna, a likelihood of many fine cleere and pleasant days. Summer in the German tongue, is said to be Summehr, that is, *Plus solis*, or more Sun then at other time.

Of Autumne.

The next after Summer is Autumne, his sign is Libra, into which the Sun entresth on the 13 day of September, 24 min. past 9 before noone, at which time the Sun enters into the first min. of Libra, and hath in the Horoscope 5 degr. and 42 min. of Scorpio Mars, Mercury, Jupiter, and Saturne are cheife Dominators. This quarter takes his name from the Latine word *Autumnus*, which signifieth to make ripe. Or else it is *Autumne a bonorum anni augmentatione*, from the increase of the fruits of the yeare now gathered in.

Of Winter.

Winter is the quarter, he's called in Latine *Hyems*, which seemeth to be derived of the Greek word *ω*, signifying to make moist

Swallow, 1647.

22 wet. His signe is Capricorn, into which the Sun entzeth this year on the 11 day of December, at 29 min. past 8 at night. The degree there ascending is 23 of Leo. Mercury is chiefe Dominatoz, with whom Saturn is share, Mars next, and Venus next.

Of the Eclipses.

li

THere will be no Ec pse visible in our Horizon this year, excepting one of the Moon, which will be on the 10. day of January, and begins 15. min. past 7. at night.

A Chronological Note of some Memorable Accidents, shewing how long it is since any of them happened.

On the 27 of *March*, the 23 yeare of our King
 beginneth, having then reigned 22 yeares
 compleat.

VIVAT REX,

AMEN

DI(AT GREX.

Swallow, 1647.

Of the foure Cardinall windes, together with
their effects in breeding or bringing
Sicknesse..

The East-wind called Subolanus, breedeth
in cholerick bodies sharp fevers, raging
madnesse, & perillous Apopsumations: in win-
ter it is ever cold, it bloweth seldome in the
night; and this one thing is proper to it, that
if it doe chance to bring raine, it continueth
commonly a whole day together.

The South-wind called Auster, is of nature
hot and moist, it breedeth corrupt humors and
in hot bodies cramps, giddinesse in the head, or
the falling sicknesse, pestilence, & cruell fevers.
The West-wind called Favonius, is of nature
cold & moist, it breedeth Phlegme in moist bo-
dies, it procureth sleep, breedeth Apoplexies and
the like. In the spring it greatly refresheth all
things, brings abroad the blood, and the sound
humors which lay hid in winter, much refresh-
ing the mind. Howbeit nere the end of Autumn
when winter beginneth to approach, it then
growes churlish both on the sea and land.

The North-wind called Septentrio, is of na-
ture cold and dry, it is good against the Pest-
lence, and yet in cold bodies it breedeth Plur-
ies, roughs, gout, & in some squinancies: yet
of all Winds it is held to be wholesomest, al-
though it be the sharpest in our winter moneths.

Swallow, 1647.

Note that what is spoken thus of their effects, is ment of their long standing in any of the said quartes. Know also, that a continuall still summer, is a signe of Plague or Earthquake.

Of Blood-letting, and some other Physicall
obseruation.

In youth, let Blood from the change to the first quarter.

In middle age, from the first quarter to the full. In elder yeares, from the full to the last quarter. And in old age, from the last quarter to the change. But know, that under the age of 14 and aboue 56, is not good to bleed at all.

Againe, in the Canicular or Dog-daies it is very hurtfull to take any physick, unlesse there be great need: and indeed necessity hath no law. Wherefore in such a case, the disease being desperate, the cure must be adventured.

Take a purgation when the Moon is in Trine or Sextile aspect with Venus, decreasing in any of these three signes Cancer, Scorpio, or Pisces, and it will be sure to worke the better; because when a moist planet in a moist sign hath such an aspect, the humours in the body are then stirred up and down, and so the better purged out. Wherefore in this case it cannot be amisse to prepare humours by something or other
which

Swallow, 1647.

which is laxative: and let this be done whileſt the Moon is either in Gemini, Libra, or Aquarius.

Take a vomit that it may work thoroughly, while the Moon is in Aries, Taurus, or Capricorn. And know, that the aspects of the Moon in Saturn, or Mars; or the Moon in Leo, ought to be eſchewed in the taking of medicines. Finally, if neceſſity urge no haſt, theſe obſervations are expedient: for it is a plaine truth, that the change of weather upon differing Aspects, doth greatly change and alter our bodies.

Things good for the Eyes.

All green colours, cold water. Fenel, water of white-roſes diſtilled, celendine, eye-bright, Morbine, Agremonie, Cloves: and for hot eyes the juce of henſlack ſoftly boyled in the ſhell of a new-laid Egge till it be cleane ſcummed, is very good.

Things ill for the Eyes.

To looke much at red colours, or at fire, to read ſoon after ſupper: to eat Garlick, Onions, Radith, roots, ſalt-meats colewores, and pulſe: as alſo to drinke Wine that is both thick and ſweet. Smoke likewiſe and duſt be very bad: and to anoint the eyes with Bats blood will cleane put them out; according to that old proverb, The blood of a Batt will make a man ſee as well by night, as by day: which may well be true in him that cannot ſee at all.

Things

Swallow, 1947.

The longest day at London, is 16 houres and 30 min. at Yorke 17, within two minutes, being 18 minutes longer then at London.

The longest day at Cambridge, is 16 houres and 34 min. longer by foure min. then the day at London, and shorter by 84 minutes then the day at Yorke.

Observations concerning the Weather.

When the Sun riseth cleere, and not red, and is red at his setting, and when the Moon at her prime (which 3 dayes and 18 houres, after the Change) appeares faire and bright, it is a signe of faire weather: but if the Sun at his rising be fiery red or a little after his rising with clouds, & at his setting be overcast with a myst, or go down behind a cloud; or if the horns of the Moon be blunt, or a blacknesse appeare in the midd of her, judge of foule weather.

Judgements of the weather by the Signe where in the Moone shall be at the Change, Quarters, or Full.

If the Moon be either change, come to the full or enter into her first or last quarter in Aries, Leo, or Sagittarius, in winter it commonly is faire weather: but in summer immoderate heat, and

the

Swallow, 1647.

Things good for the Braine.

To smell to Camomill: or red-roses: to wash the temples often with rose-water, to eat Sage measurably, to drinke wine not over-much, to keepe the body warme, to wash the hands often, to walke and sleep measurably, to eat Mustard and Pepper, and not to be troubled with too much noise.

Things ill for the Braine.

Late suppers, much sleep after meat anger, to smell to a white Rose-garlick, onyons, much milk and cheese, to stand long against your use bare-headed, to eat hastily and over-much, to eat too liberally on any kind of braines much sweat in labour or travell, and a belotted practice, or daily course in drinking.

Other Notes fit to be knowne.

Note that sixty minutes make one hour.
Forty & five min. make three quarters of an hour.
Thirty min. make half an hour, 15 min. a quarter.
Twelve Inches make one foot, 3 Feet, or 36 inches a yard. Three feet & 9 inches, or 45 inches make an Ell, sixteen feet and 6 inches, make one Pole or rod to measure Land withall. Forty Poles make one Furlong. Eight Furlongs make one mile. 3 miles one League. The compasse of the whole Earth is held to be 21000. and 600 miles, containing the full and just number of 300 and 60 degrees, each degree being equall to three-score miles. The sun in one hour goeth 900 miles, as some have demonstrated.

The compasse of England is held to be 1531 miles.

The

the hotter if it happen in Iune, or Iuly. If the change be at the full, or enter into the first or last quarter in Taurus, Virgo, or Capricorne, in winter judge of cold weather: but in summer temperate weather. When the said times chance in Gemini, Libra, or Aquarius, judge of much wind especially in Autumn or Spring. If the Moon change, be at the full, enter into the first or last quarter in Cancer, Scorpio, or Pisces, in winter it foretelleth moist and rainy weather, or snow to follow; but in summer pleasant & temperate weather to ensue. Thus observing the foresaid tokens, it will for the most part bring you to the knowledge of the weather.

Observations for Husband-men and others.

In January take off superfluous branches from Frute-trees, and prepare your ground for Gardens, uncover Tree-roots, cut your Vines in some of the twelve dayes.

Set Quick-sets, Roses, and sallots in the moneth of February. And now cover up the rootes of your Trees with good earth, which you opened before in the beginning of Ianuary.

In March you may Graft, but in planting and grafting chuse a warme time: whersfore let not the wind be in the East or North, because such winds are commonly nipping, especially being helped by any aspect of the Moone with Saturne or Venus; in cold signes as Virgo, Capricorn, Taurus Scorpio, Pisces, or Cancer.

In the end of Aprill, or beginning of May, set and sow tender herbes and seeds in your Gardens, in a good temperature of ayre.

If you meane to preserve Flowers or seeds gather them in a full Moone, let the sun shine first upon them, and they will keepe the better: but let them not be dyed in the Sun, lest the Sun draw away part of their vertue.

Swallow. 1646.

Remove young Trees either in the end of October, November or February, the mone increasing :and be sure to set that side South which was south before because it cannot endure the cold North.

Shore Sheepe the Mone increasing, and their fleeces will grow the better againe. The like observe for cutting of haire, the Mone in Taurus, Virgo, or Libra.

Seld cattell the Mone in Aries, Sagatarius. or Capricorn, being in her last quarter.

Gather all Fruits that you meane to keepe, in a dry time, when the mone is at the full,

Sow all such Seeds as have round rotes (as Onions, Leeks, Turneps, &c.) either three or foure dayes before the full, or three or foure dayes after the full.

A Table of the Kings of England.
